

Gold options specifications

Min/max trade sizes	Minimum trade size is 0.01 lots (1 ounce). Maximum trade size per click is 3 lots (300 ounces).
Max position sizes	Maximum position size is 10 lots (1,000 ounces) for any individual Gold option symbol. There is also a maximum premium exposure limit of USD 100,000* across all Gold CFD option positions. For example: • If you buy 10 lots of a Gold CFD option priced at 90, your total premium exposure is USD 90,000. • You would then have USD 10,000 of remaining capacity under the limit. • You could therefore buy another Gold CFD option(s) with a total premium of up to USD 10,000 (for example, 5 lots priced at 20, giving a premium of USD 10,000). • Once your total premium exposure reaches USD 100,000, you will not be able to open any additional Gold CFD option positions unless your existing exposure is reduced. • <i>The premium in this calculation is calculated from your buy price for each option.</i>
Price movement	10 cent increments
Last trade time	13:25 NY time on the expiry day.
Settlement method	Cash-settled at intrinsic value at expiry, based on the official CME settlement price of the corresponding gold futures contract at or shortly after 13:30 NY time on the expiry day.

Trading carries risk.
